

Use-Case Flow

Podcast Guest Scheduling & Outline Builder

Use Case ID: UC-02

Use Case Name: Book Interview Slot & Submit Outline

Primary Actor: Podcast Guest

Supporting Actors: Calendar Service, Notification Service

Related Requirements: FR-001, FR-002, NFR-002

Preconditions

- The host has published available slots for the episode (UC-01).
- The guest has a valid booking link that has not been used yet.
- The guest has not already booked a slot for the same episode.

Postconditions

- The slot is marked as booked and is no longer shown to other guests.
- A calendar invite and a confirmation email reach the guest and the host.
- The topic outline and biography links are saved to the episode board.

Main Success Scenario

1. The guest opens the booking link sent by the host.
2. The system shows the episode details and the open time slots.
3. The guest picks a date and a time slot.
4. The system checks the slot is still free and inside the host's working hours (includes UC-06).
5. The system shows the outline form.
6. The guest adds at least three talking points and, if they want, a biography or social link.
7. The guest submits the booking.
8. The system saves the outline to the episode board and books the slot.
9. The system sends the calendar invite and the confirmation email (includes UC-07).
10. The system shows a confirmation page with the slot time in the guest's own time zone.
11. The host is notified that a new outline is waiting for review (leads to UC-03).
12. The use case ends successfully.

Alternate Flow 4a: The slot was just taken by someone else

- 4a.1. The check at step 4 finds that another guest booked the slot first.
- 4a.2. The system says the slot has gone and refreshes the open slots.
- 4a.3. The guest picks a different slot and the flow continues from step 4.
- 4a.4. If no slots are left, the guest can join a waiting list and the use case ends without a booking.

Alternate Flow 6a: The biography link is not a proper web address

- 6a.1. The system finds that one of the links the guest typed is not a working web address.
- 6a.2. The system points out the field, shows an example of the right format and waits.
- 6a.3. The guest fixes or deletes the link and the flow continues from step 7.

Exception

- 1. If the booking link has expired or was already used, the system asks the guest to request a new link and the use case ends without a booking.
